

Headaches, Not Sleeping or Grinding?

The Team at DentalCareXtra see lots of patients who suffer from Clenching and Grinding related issues.

This includes enlarged muscles in the jaw, broken sleep, headaches and migraines along with broken teeth and damaged teeth restorations.

If you have any of these underlying issues, it prevents or hinders a successful completion of restoration treatment and reduces the longevity of restorations.

Treatment for Clenching and Grinding is based on a personalised treatment plan.

For some patients we start to see the improvement within 2-3 weeks, others require involvement of other health professionals as part of the treating team.

If you're looking for options and solutions to your current issues, give us a call today, to enable us to find the treatment plan that suits your needs.

It's Free For a Reason!

If your using a preferred Health fund Provider saying they offer "No Gap" it pays to ask...

- Are you getting the treatment you "Need" not what the Health Fund is prepared to pay?
- Why should your benefit be less than what you would get with a non-contractor dentist?
- Are they locally owned Dentist that reinvests back in their Community?
- Are they there when you need them most (i.e. After Hour's and Emergency Services) ?

Out and About

The month of May was a very busy one for the DentalCareXtra Team, out and about in our Community talking about Oral Health for Kids. We met pupils at C&K and East State School in Moranbah, along with Nebo School, talking about how to care for teeth along with healthy eating. If you would like to hold an education session for your School, Sporting or Community group, please give us a call as we would love to help!
